

BiziFilters

— Giving Winery Waste a Second Life —

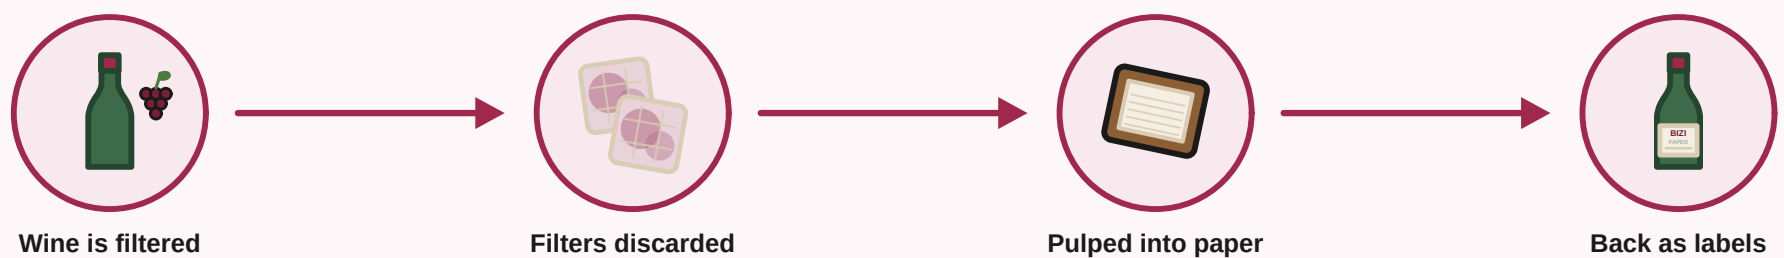

THE CHALLENGE

The wine industry produces huge volumes of used cellulose filters, almost all sent to landfill or incineration because no effective recycling route exists.

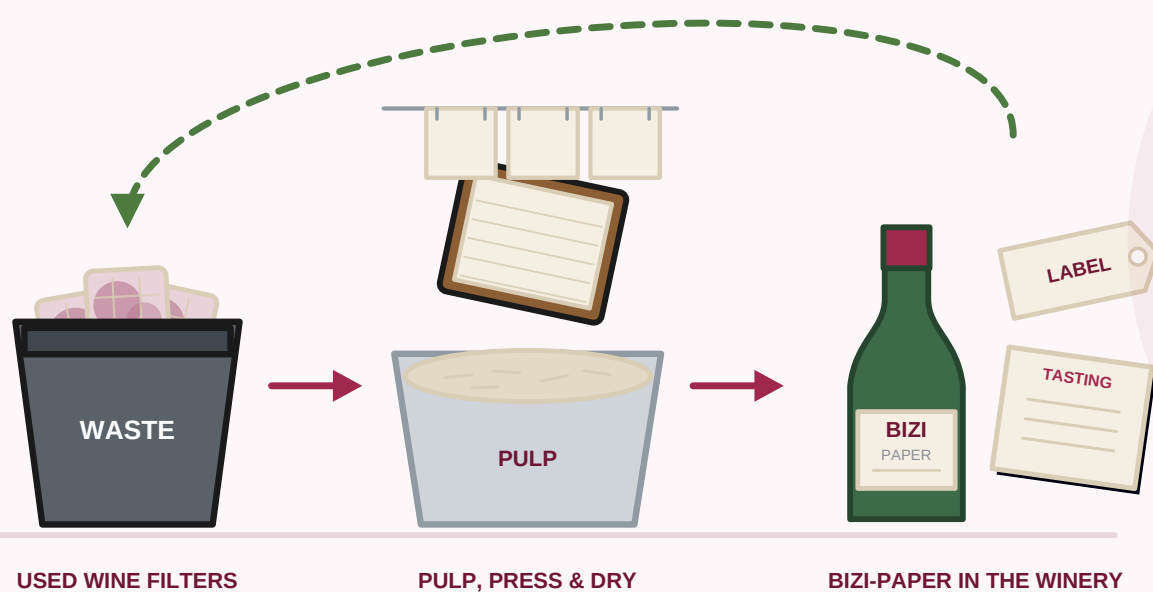

OUR SOLUTION

BiziPaper turns those used winery filters into paper — a circular material reborn as wine labels, menus, bottle tags and branded stationery that re-enters the winery.

HOW IT WORKS

BACK INTO THE WINE ECOSYSTEM

The filter that clarified the wine comes back as the label on the bottle
