

EkoKit

— Grow Microplastic-Free Food at Home —

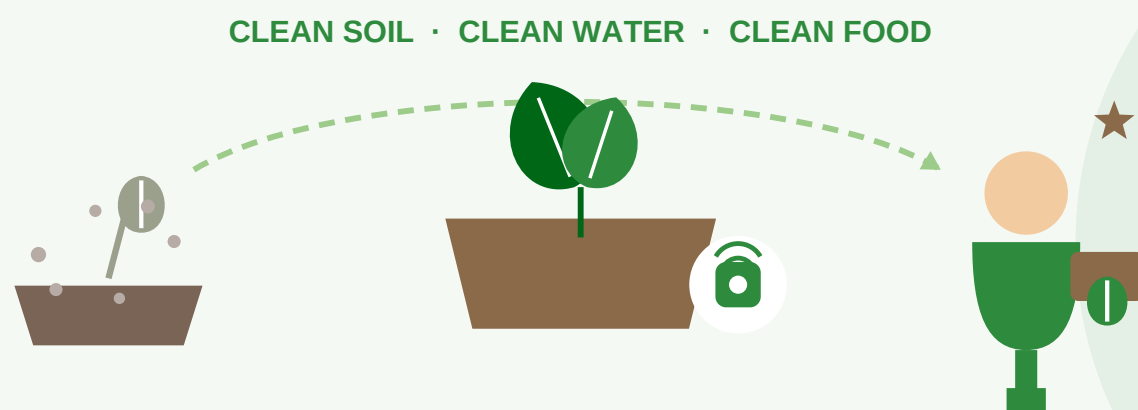

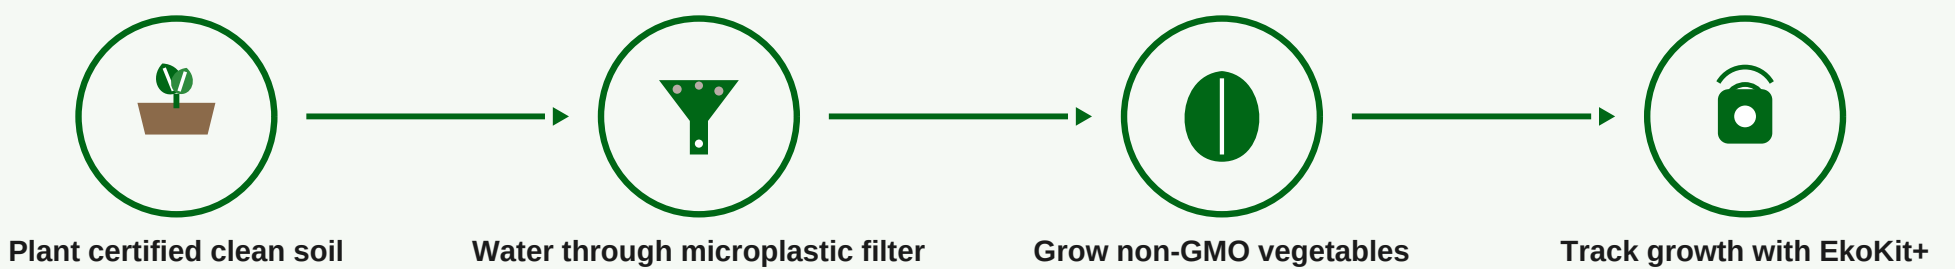

THE CHALLENGE

Microplastics are everywhere — in our soil, water and food — and they never fully decompose. Even home-grown vegetables can be contaminated, and studies link chronic exposure to cell damage, hormonal disruption and other serious health risks.

OUR SOLUTION

EkoKit is a ready-to-use urban gardening box with lab-certified microplastic-free soil, a water filter that strips microplastics before they reach your plants, and non-GMO seeds — plus, in EkoKit+, a smart sensor and app that track moisture, cleanliness and nutrients.

HOW IT WORKS

MICROPLASTIC CONTAMINATION
