

Greenbites

— Travel Slow, Taste Local —

THE CHALLENGE

Halving global meat consumption could help stop climate change, but students rarely choose vegetarian options — sustainable food info is scattered, existing apps don't combine it with real discounts, and eating plant-based alone isn't always appealing.

OUR SOLUTION

Greenbites is a gamified app that logs your meals, shows the carbon footprint you save by eating plant-based, and rewards you with points — redeemable for discounts at partner vegetarian restaurants and exclusive recipes, exclusively for students.

HOW IT WORKS

Halving meat consumption could help stop climate change, one meal at a time
